**T & T Field Report #:** ..... **25217**  
**Engineering File #:** ..... **201024189**

11603

The above-mentioned equipment required a Level IV inspection and certification for service.

T & T Inspections 2019 Ltd conducted the magnetic particle inspection and visual examination.

Based on the inspection and review of critical dimensions and components, it is our opinion that the equipment is a safe operating unit and may be returned to service within the manufacturer's original ratings and specifications.

This certification is valid for a period of 500 operating days, as per the recommendations provided by the Canadian Association of Oilwell Drilling Contractors, or until the unit has been damaged either as a result of operation, transportation or handling.

APEGA Permit to Practice:  
P 14816
